Experience

Restaurant crew member | **McDonald's**
03.2018 - 09.2018 | Sumy

Software engineer (full-stack developer) | **PJSC Sumyoblenergo**
02.2021 - **to the present** | Sumy
My responsibility is to develop and support in-house web applications. I develop both front and back-end applications. To develop front-end I use such technologies as: JavaScript, HTML/CSS, jQuery. For backend: PHP, MySQL. Often I use asynchronous requests to get data from back-end.

Skills

Front-end
HTML/CSS, JavaScript, jQuery, React.js, Redux, Material UI

Back-end
PHP, MySQL

About my studies

Besides work, i study front-end. I study technologies like JS, React.js, Redux, Material UI, Node.js. There are pet-projects. Also from the projects I can single out my master's degree. This is a simulator for the study of infectious diseases. For the implementation I used React.js, Redux, Material UI, PHP.
In the future I want to develop as a frontend or fullstack developer and I am ready to study new technologies with interest.
